

METHOD AND APPARATUS FOR SPREADING SYMBOLS IN A COMMUNICATION SYSTEM

5

Abstract of the Disclosure

A spreader (216) comprises a code generator (301) and exclusive OR
circuitry (303). In the preferred embodiment of the present invention the code
generator (301) generates a code having a length and value dependent upon
10 the current transmission rate. This code is then exclusive OR'd with the
incoming data stream to produce spread data.
